

Enterprise Architecture Comprehensive Reviewer

PART 1: The Rise of Enterprise Architecture (Based on "EA Lecture Note 0 overview v.2.pdf")

1. According to the text, which of the following is NOT one of the three major phenomena resulting from the rapid diffusion of ICTs?

- A) The exponential decrease in the cost of maintaining legacy systems.
- B) The transformation of people's everyday life and dependence on ICTs.
- C) An exponential increase in the wealth of knowledge, information, and data.
- D) The pervasion of ICTs in all sectors for social and economic development.

Answer: A

Explanation: The text states that the cost and complexity of ICT systems have actually increased exponentially, not decreased. The other three options are the exact phenomena listed.

2. Memorization: It is estimated that what percentage of the data stored worldwide has been generated in the last two years?

- A) 50%
- B) 75%
- C) 90%
- D) 99%

Answer: C

Explanation: The text explicitly notes that 90 percent of the data stored worldwide has been generated in the last two years.

3. Situational: A large corporation realizes its mission-critical information is consistently out-of-date, and there is immense distrust between the business and technology sides of the organization. What do these issues represent?

- A) The successful implementation of an EA framework.

- B) Major operational problems existing in many large organizations today.
- C) The direct result of platform-as-a-service vendors.
- D) The desired future state of the enterprise.

Answer: B

Explanation: These are listed under the major operational problems that occur when the cost/complexity of ICT increases while value decreases.

4. Definition: How does the text define a "project" in the context of an enterprise?

- A) A permanent organizational structure.
- B) A special organization that exists for the period of its implementation.
- C) A strictly outsourced business operation.
- D) A technological upgrade to existing infrastructure.

Answer: B

Explanation: The text defines a project as a special organization that exists only for the period of its implementation.

5. Which of the following is considered an "enterprise"?

- A) A private sector company.
- B) A government ministry.
- C) A multinational joint venture.
- D) All of the above.

Answer: D

Explanation: The text states that an enterprise can take different forms, including private companies, government offices, non-profits, or multinational groupings.

6. The most important aspect of the term "enterprise" is that it includes multifaceted socio-technical structures comprising:

- A) Hardware, software, networks, and data.
- B) People, information, processes, and technologies.
- C) Executives, managers, staff, and contractors.

D) Budgets, schedules, scopes, and risks.

Answer: B

Explanation: The text specifically notes that an enterprise includes the multifaceted socio-technical structures or systems that include people, information, processes, and technologies.

7. Definition: In general, what is the primary purpose of enterprise architecture?

A) To replace all human resources with automated technologies.

B) To design the most elegant technological infrastructure possible.

C) The greater alignment between ICT and business concerns, linking strategy formulation to execution.

D) To strictly enforce technical coding standards among software developers.

Answer: C

Explanation: The text states the purpose is the greater alignment between ICT and business concerns, and coherency between various concerns, including the link between strategy formulation and execution.

8. An enterprise architect is entrusted with assessing and recommending changes that typically include all of the following EXCEPT:

A) Innovations in the structure or processes of an organization.

B) Integration and/or standardization of business processes.

C) Decreasing the overall salaries of the human resources department.

D) Improving the quality and timeliness of business information.

Answer: C

Explanation: While EA aims to save costs, directly decreasing HR salaries is not listed as a typical change an architect assesses and recommends.

9. Situational: A company is struggling to manage its complex IT environment and make accurate IT investment decisions. How can Enterprise Architecture benefit them?

A) By entirely outsourcing their IT department.

B) By providing a tool for the assessment of benefits, impacts, and supporting analyses of alternatives and risks.

- C) By eliminating the need for business processes.
- D) By allowing the IT department to dictate business strategy.

Answer: B

Explanation: One of the listed benefits of EA is supporting capital planning and investment control by providing a tool for assessment, analysis of alternatives, risks, and tradeoffs.

10. Which of the following is a benefit of Enterprise Architecture regarding legacy systems?

- A) It permanently maintains all legacy systems to preserve history.
- B) It expedites the integration of legacy, migration, and new systems.
- C) It instantly deletes legacy data to clear server space.
- D) It prevents the organization from migrating off legacy systems.

Answer: B

Explanation: Expediting the integration of legacy, migration, and new systems is explicitly listed as a benefit of EA.

11. Situational: A government official uses EA to look at their duties from a macro point of view rather than just a micro/process level. Why is this beneficial?

- A) It helps them redefine their duties efficiently according to adopted government policies and strategies.
- B) It allows them to ignore technical IT constraints.
- C) It guarantees they will receive a larger budget next quarter.
- D) It proves that government processes do not need technology.

Answer: A

Explanation: The text notes that looking from a macro point of view helps government officials redefine their duties efficiently according to adopted policies and strategies.

12. When identifying the purpose of EA, what is the FIRST step according to the lecture note?

- A) Document the desired future state.
- B) Construct a transition plan.

- C) Identify the current state of how ICT is being used and the business value it provides.
- D) Document the "gap".

Answer: C

Explanation: Step 1 in the purpose of EA list is to identify the current state of how ICT is currently being used, technologies deployed, and business value provided.

13. In the EA process, what does documenting the "gap" refer to?

- A) The physical distance between the IT department and the business executives.
- B) The difference between the budget requested and the budget approved.
- C) The difference between where the organization is heading (business as usual) and where it would like to be (desired future state).
- D) The time it takes to implement a new software system.

Answer: C

Explanation: The text defines the gap as the difference between where the organization is heading and where it would like to be from an ICT perspective.

14. Pitfall Recognition: An EA initiative fails because the lead architect, despite being highly technical, lacks enthusiasm, communication skills, and strategic thinking. Which pitfall does this represent?

- A) Not engaging the business people
- B) Architecting the "Boxes" Only
- C) The Wrong Lead Architect
- D) Doing Current-State EA First

Answer: C

Explanation: Pitfall 1 explains that ineffective leadership ("soft" skills like enthusiasm and communication) is the single biggest EA problem.

15. Situational: The EA team spends months perfecting a model of how the business currently operates, but loses sight of the company's future vision. Which pitfall did they fall into?

- A) Doing Current-State EA First
- B) The EA Group Does Most of the Architecting

- C) Not Measuring the Impact
- D) Doing Only Technical Domain-Level Architecture

Answer: A

Explanation: Pitfall 5 warns against mapping the current state first, as it is relatively easy but causes architects to lose the vision of the future.

16. "The key is to 'sell' first and architect later" is a strategy to combat which EA pitfall?

- A) The Wrong Lead Architect
- B) Insufficient Stakeholder Understanding and Support
- C) Architecting the "Boxes" Only
- D) Not Establishing Effective EA Governance Early

Answer: B

Explanation: To manage insufficient stakeholder understanding (Pitfall 2), experts suggest selling the concept to secure sponsorship before architecting.

17. Situational: The IT department works in a "silo" and tries to develop an architecture without involving the senior staff members managing the business operations. Which pitfall is this?

- A) Doing Only Technical Domain-Level Architecture
- B) Not Engaging the Business People
- C) Not Spending Enough Time on Communications
- D) The EA Group Does Most of the Architecting

Answer: B

Explanation: Pitfall 3 warns that working in "silos" and not engaging business people in joint architecture development is a major pitfall.

18. Pitfall Recognition: An EA team focuses entirely on software, servers, and networks, completely ignoring business, information, and solutions architecture. This is an example of:

- A) Architecting the "Boxes" only
- B) Not engaging the business people

- C) Doing only technical domain-level architecture
- D) Doing current-state EA first

Answer: C

Explanation: Pitfall 4 states that doing only technical domain-level architecture is a negative strategy; a holistic approach is much broader.

19. What should the primary job of enterprise architects be, rather than imposing EA content on the organization?

- A) To write all the code for new applications.
- B) To fire non-compliant stakeholders.
- C) To lead the EA process and form virtual teams to create content and seek consensus.
- D) To only measure the financial impact of IT.

Answer: C

Explanation: Pitfall 6 explains that architects should lead the process and form teams, rather than doing most of the architecting themselves.

20. Situational: An EA program successfully streamlines operations and saves the company \$1 million, but the EA team never reports this to the rest of the company. As a result, executives view the EA team as a cost center and cut their budget. What pitfall occurred?

- A) Not Establishing Effective EA Governance Early
- B) Not Measuring and Not Communicating the Impact
- C) Not Spending Enough Time on Communications
- D) The Wrong Lead Architect

Answer: B

Explanation: Pitfall 7 explains that because EA value is often indirect/intangible, not announcing successes and impacts exposes the work to the risk of failure.

21. According to Pitfall 8 ("Architecting the 'Boxes' Only"), what is a high priority that must account for more than just technical architecture?

- A) Integration and interoperability standards (the links between the boxes).
- B) Server rack placement.

- C) Buying the most expensive software.
- D) Hiring more programmers.

Answer: A

Explanation: Pitfall 8 warns that architects must focus more on the links between the boxes—integration and interoperability—rather than treating units as isolated smaller enterprises.

22. What is "Enterprise Architecture Governance"?

- A) The legal department of the IT team.
- B) The structure by which an enterprise defines appropriate strategies and ensures development alignment with those strategies.
- C) The process of auditing employee internet usage.
- D) A software tool for managing network traffic.

Answer: B

Explanation: Pitfall 9 defines governance as this structure, emphasizing it must be established early in the process.

23. Situational: An EA team is fully funded but struggles to gain traction because the general employee base has no idea what EA is or why it matters. The team failed to execute an education and PR plan. Which pitfall is this?

- A) Insufficient Stakeholder Understanding
- B) Not Spending Enough Time on Communications
- C) Not Engaging the Business People
- D) The Wrong Lead Architect

Answer: B

Explanation: Pitfall 10 emphasizes the need for public relations and an EA communications plan with messages tailored for each audience to spread awareness.

24. According to R. Scot Bittler of Gartner, the key for enterprise architects is to create:

- A) The most perfect architecture for the moment.
- B) The most elegant architecture for the moment.

- C) The cheapest architecture possible.
- D) The most adaptable architecture for the future.

Answer: D

Explanation: The quote directly states that the goal is not the perfect/elegant architecture for the moment, but the "most adaptable architecture for the future."

25. The enterprise architecture team requires people with expertise in three categories. Which of the following is NOT one of those three?

- A) Technology (Infrastructure, tools, applications)
- B) Enterprise (Business and data)
- C) Marketing (Sales, advertising, PR)
- D) Policies (Integration and security)

Answer: C

Explanation: The three areas of expertise listed are Technology, Enterprise, and Policies. Marketing is not included.

26. According to the lecture note, the expertise and skills for EA will be shared by three categories of people on the team. Which of these is one of those categories?

- A) Business leaders
- B) Graphic designers
- C) Outside auditors
- D) Custodial staff

Answer: A

Explanation: The three categories of people on the EA team are Business leaders, Business unit/speciality architects, and Enterprise architects.

27. Definition: How does Gartner define Enterprise Architecture?

- A) A technology implementation protocol for hardware.
- B) A discipline for proactively and holistically leading enterprise responses to disruptive forces by identifying and analyzing the execution of change toward desired business vision and outcomes.

- C) A financial accounting method for IT depreciation.
- D) A strict set of rules for employee desktop configurations.

Answer: B

Explanation: The summary section directly quotes Gartner's glossary definition, matching option B verbatim.

28. True or False context (Situational): A business executive wants to start an EA program solely to catalog the company's existing computers and servers. Based on the reading, is this a correct understanding of EA?

- A) Yes, EA is strictly an IT asset inventory tool.
- B) No, EA is a holistic approach considering business, information, process, and technology changes to execute enterprise strategy.
- C) Yes, but only if they also include software licenses.
- D) No, EA only deals with future state architecture, never current assets.

Answer: B

Explanation: EA is not just IT inventory (boxes); it is a holistic, well-defined practice for business and IT alignment.

29. What is a primary reason the chances of obtaining real value from ICT systems have dramatically decreased?

- A) Technology has become too cheap.
- B) The cost and complexity of ICT systems have increased exponentially.
- C) Employees refuse to use computers.
- D) There is a lack of available data.

Answer: B

Explanation: The text states that while cost and complexity increased exponentially, chances of obtaining real value decreased, leading to major operational problems.

30. Memorization: Which organization cited the statistic about 90% of the world's data being generated in the last two years in their 2013 report?

- A) Gartner
- B) UNDP

C) SINTEF

D) IBM

Answer: C

Explanation: The references section cites SINTEF (ScienceDaily, 2013) for the 90% data generation statistic.

31. Which of the following is a concern that enterprise architects have to deal with regarding "Revitalizing the skills base"?

A) Trimming existing project costs.

B) Finding new approaches to outsourcing.

C) The growing trend of applying smart technologies requiring advanced technical skills.

D) Cutting the budget by 50 percent.

Answer: C

Explanation: Under "Concerns of EA," revitalizing the skills base is necessary because human resources must keep up with smart technologies and advanced technical solutions.

32. Doing more with less is a concern for EA because continuous economic concerns have led companies to cut budgets by 50% or more. This cut must be done without:

A) Using any open-source software.

B) Jeopardizing operations and quality of work.

C) Informing the stakeholders.

D) Changing any legacy systems.

Answer: B

Explanation: The text states budget cuts must be done without jeopardizing operations and quality, maintaining the same service level agreements.

33. What represents the "transition plan" in the purpose of Enterprise Architecture?

A) The gap between the two future states.

B) The documentation of the current state.

C) A list of projects and initiatives to put the ICT infrastructure back on track towards the desired future state.

D) The decision to outsource IT to a software-as-a-service vendor.

Answer: C

Explanation: Step 6 identifies the transition plan as the list of projects/initiatives that will attempt to close the gap and move toward the desired future state.

PART 2: An Overview of Enterprise Architecture (Based on "EA Lecture Note 1 overview.pdf")

34. What is the main concept of Enterprise Architecture as presented in Lecture Note 1?

A) It is a technology-driven activity that replaces management.

B) It is a strategy and business-driven activity that supports management planning and decision-making.

C) It is a process-centric approach to eliminate all hardware.

D) It is solely a financial audit mechanism.

Answer: B

Explanation: The chapter overview states that EA is a strategy and business-driven activity supporting management planning by providing coordinated views of the enterprise.

35. Definition: How is "Enterprise" defined in this specific lecture note?

A) A strictly for-profit business entity.

B) An organization or sub-activity whose boundary is defined by commonly-held goals, processes, and resources.

C) A supply chain consisting of at least 5 different organizations.

D) Any group of people working together in an office.

Answer: B

Explanation: The Key Terms slide defines an enterprise by its boundary of commonly-held goals, processes, and resources.

36. Memorization: What is the "sound bite" equation that represents what EA is all about?

A) $EA = HR + IT + Finance$

B) $EA = Strategy + Business + Technology$ ($EA = S + B + T$)

- C) $EA = Systems + Boxes + Tools$
- D) $EA = Scope + Budget + Timeline$

Answer: B

Explanation: The slide "What is Enterprise Architecture?" explicitly states the equation is $EA = S + B + T$.

37. Situational: A home builder decides to build a house one room at a time without blueprints for the whole house. How does this analogy apply to an enterprise?

- A) It represents the Agile software development method.
- B) It represents a highly efficient way to manage resources.
- C) It is analogous to developing organizations/systems without an enterprise-wide architecture, leading to duplication and inefficiency.
- D) It shows that EA is completely unnecessary for small businesses.

Answer: C

Explanation: The "Home Architecture Analogy" slide explains that building without blueprints leads to a poor result, analogous to developing without an EA reference, resulting in duplication and inefficiency.

38. Which of the following is NOT one of the eight Major Areas of Integrated Governance?

- A) Strategic Planning
- B) Capital Investment Planning
- C) Marketing and Advertising
- D) Knowledge Management

Answer: C

Explanation: The Integrated Governance wheel diagram includes Strategic Planning, EA, Capital Investment, Workforce, Knowledge, Program Mgmt, Risk Mgmt, and Operations & Security. Marketing is absent.

39. Why is Enterprise Architecture considered a "Meta-Discipline"?

- A) Because it focuses strictly on metadata.
- B) Because it serves as an umbrella or "meta-context" for all other management and

technology best practices.

C) Because it was invented by the company Meta (Facebook).

D) Because it is a theoretical concept that cannot be implemented.

Answer: B

Explanation: The text describes EA as a meta-discipline because it is holistic and serves as an umbrella/meta-context for other best practices (like ITIL, Six Sigma, etc.).

40. Which of the following sits at the "Strategic Level" within the EA Meta-Discipline diagram?

A) Six Sigma

B) Balanced Scorecard

C) ITIL

D) Cloud Computing

Answer: B

Explanation: According to the "EA as a Meta-Discipline" slide diagram, Balanced Scorecard is located at the Strategic Level.

41. How many "Core Elements" make up the Enterprise Architecture Approach?

A) 4

B) 5

C) 6

D) 7

Answer: C

Explanation: The visual diagram and subsequent slides outline exactly 6 core elements: Governance, Methodology, Framework, Artifacts, Standards, and Best Practices.

42. Definition: Which core element identifies the planning, decision-making, and oversight processes that determine how the EA is developed and maintained?

A) Framework

B) Methodology

C) Governance

D) Artifacts

Answer: C

Explanation: Governance is defined exactly this way on the "Core Elements - Governance" slide.

43. Definition: Which core element identifies the scope of the overall architecture and the type/relationship of various sub-architecture levels?

A) Standards

B) Framework

C) Best Practices

D) Artifacts

Answer: B

Explanation: Framework is defined as identifying the scope and relationships of sub-architecture levels and threads.

44. What do "Artifacts" refer to in the context of the EA Approach?

A) Ancient technological hardware kept for historical purposes.

B) The types and methods of documentation used in each sub-architecture area (e.g., models, diagrams, plans).

C) The specific software brands chosen by the enterprise.

D) The employees who have worked at the company for over 10 years.

Answer: B

Explanation: Artifacts are defined as the types and methods of documentation (strategic analyses, models, databases, etc.) stored in the online repository.

45. As a management program, EA provides all of the following EXCEPT:

A) Strategic Alignment

B) Standardized Policy

C) Micro-management of employee daily tasks

D) Resource Oversight

Answer: C

Explanation: The slide "EA as a Management Program" lists Strategic Alignment, Standardized Policy, Decision Support, and Resource Oversight. It does not provide micro-management.

46. Situational: An enterprise wants to ensure that a newly proposed multi-million dollar software project actually supports the company's long-term business goals. Which function of the EA Management Program provides this?

- A) Strategic Alignment
- B) Resource Oversight
- C) Standardized Policy
- D) Configuration Management

Answer: A

Explanation: Strategic Alignment involves reviewing projects to determine if they support the enterprise's strategic goals and maximize resource efficiency.

47. According to the "Standardized Policy" slide, policy documents are categorized hierarchically. Which of the following is an example of "detailed process guidance"?

- A) High-level directives
- B) Memos
- C) Standard Operating Procedures (SOPs)
- D) Program manuals

Answer: C

Explanation: The slide explicitly categorizes Standard Operating Procedures as detailed process guidance.

48. In providing "Decision Support" at the staff level, EA supports decisions regarding:

- A) Large IT initiative visibility for executives.
- B) Operations, maintenance, and development of IT resources and services.
- C) Setting the enterprise's overarching strategic direction.
- D) Global marketing campaigns.

Answer: B

Explanation: At the staff level, decision support focuses on operations, maintenance, and the

development of IT resources and services.

49. The EA Analysis and Design Method uses how many basic elements?

- A) 3
- B) 4
- C) 6
- D) 8

Answer: C

Explanation: The text explicitly lists 6 elements: (1) framework, (2) methodology/components, (3) current views, (4) future views, (5) EA Management Plan, and (6) Threads. *(Note: The slide numbers them 1 through 6).*

50. What is the Highest Level & View in the EA3 Cube Framework?

- A) Data & Information
- B) Networks & Infrastructure
- C) Goals & Initiatives
- D) Systems & Applications

Answer: C

Explanation: In the EA3 Cube diagram, the top level is "Goals & Initiatives".

51. What is the Lowest Level & View in the EA3 Cube Framework?

- A) Products & Services
- B) Systems & Applications
- C) Data & Information
- D) Networks & Infrastructure

Answer: D

Explanation: In the EA3 Cube diagram, the bottom foundational level is "Networks & Infrastructure".

52. Definition: In the EA3 Cube, what is a "Segment"?

- A) A completely outsourced business function.

- B) A single software application.
- C) Vertical sub-areas of the enterprise with distinct business activities and resources (e.g., documenting one or more LOBs at all levels).
- D) A horizontal thread that crosses all lines of business.

Answer: C

Explanation: A segment architecture focuses on one or more specific business units (Lines of Business) across all hierarchical levels.

53. Memorization: What does LOB stand for in Enterprise Architecture?

- A) Level of Baseline
- B) Line of Business
- C) List of Benefits
- D) Logic of Business

Answer: B

Explanation: LOB stands for Line of Business, a distinct area of activity within the enterprise.

54. Definition: An email system or an administrative support system that serves the whole enterprise is an example of a:

- A) Vertical component
- B) Horizontal (Crosscutting) component
- C) Sub-architecture
- D) Strategic Goal

Answer: B

Explanation: Crosscutting (horizontal) components are resources that serve several or all lines of business, like enterprise-wide email.

55. Situational: The manufacturing division of a company uses a specific robot assembly machine that no other division uses. In the EA framework, this machine is a:

- A) Horizontal component
- B) Vertical component
- C) Strategic Initiative

D) Data component

Answer: B

Explanation: A vertical component serves only one specific line of business (in this case, manufacturing).

56. What does the "Current Architecture" view serve to create?

A) A 'baseline' inventory of current resources and activities.

B) The future operating state of the business.

C) The marketing plan for next year.

D) The financial budget for the upcoming decade.

Answer: A

Explanation: The current (as-is) architecture serves to create a baseline inventory to help analysts see gaps in performance.

57. What document articulates the EA program approach, provides current/future views, and contains a sequencing plan for managing the transition?

A) The Employee Handbook

B) The IT Security Policy

C) The EA Management Plan

D) The Business Continuity Plan

Answer: C

Explanation: Element #5 states the EA Management Plan articulates the approach and provides a sequencing plan for managing the transition.

58. EA documentation includes "threads" of common activity present in all levels of the framework. What are these three threads?

A) Hardware, Software, Network

B) Security, Standards, Skills

C) Planning, Execution, Review

D) Cost, Schedule, Scope

Answer: B

Explanation: Element #6 states the threads present in all levels are IT-related security, standards, and skill considerations.

59. Why is it important for the EA to draw on accepted international, national, and industry "Standards"?

- A) To make the architecture as proprietary and closed as possible.
- B) To promote the use of non-proprietary solutions, enhancing integration and component switch-out.
- C) To increase the cost of software development.
- D) To limit the abilities of the human resource department.

Answer: B

Explanation: The Standards slide states that using accepted standards promotes non-proprietary solutions, enhancing integration and the ability to switch out components.

60. Under the "Skills" thread, what is considered perhaps the greatest resource an enterprise has?

- A) Its data warehouse
- B) Its server infrastructure
- C) People
- D) Financial capital

Answer: C

Explanation: The Skills slide explicitly states: "Perhaps the greatest resource that an enterprise has is people."

61. What is the difference between a Reference Architecture and a Segment Architecture?

- A) They are exactly the same thing.
- B) Reference focuses on a particular capability (e.g., cloud computing) across the enterprise, while Segment focuses on specific business units (e.g., finance).
- C) Segment is for IT only, Reference is for Business only.
- D) Reference is only used for current state, Segment is only used for future state.

Answer: B

Explanation: A reference architecture provides standards for a capability type (like mobile services), whereas a segment focuses on one or more business units (like accounting).

62. Where is EA documentation archived to provide easy access for stakeholders, planning, and decision-making?

- A) In a locked physical filing cabinet.
- B) On the lead architect's personal laptop.
- C) An online EA repository (website and database).
- D) It is memorized by the EA team and never written down.

Answer: C

Explanation: The EA Repository slide explains that documentation is archived in an online EA repository, which is essentially a website and database.

63. What is the name of the example EA repository design provided in the lecture?

- A) Enterprise Architect Pro
- B) Living Enterprise™
- C) The Matrix
- D) SharePoint Architecture

Answer: B

Explanation: The example provided in the diagram for the EA repository design is called "Living Enterprise™".

64. Situational: According to the Drivers of Architectural Change model, who provides the "New Direction & Goals" at the Strategic level?

- A) Management Team
- B) Support Team
- C) Leadership Team
- D) External Consultants

Answer: C

Explanation: In the diagram "Drivers of Architectural Change," "New Direction & Goals" points to the Leadership Team at the Strategic level.

65. In the Drivers of Architectural Change model, what does the Support Team provide at the Tactical level?

- A) New Direction & Goals
- B) New Business Priorities
- C) Emerging Technologies
- D) Operating Scenarios

Answer: C

Explanation: The diagram shows the Support Team bringing "Emerging Technologies" at the Tactical level.

66. What does the "S" stand for in $EA = S + B + T$?

- A) Systems
- B) Standards
- C) Strategy
- D) Security

Answer: C

Explanation: $EA = \text{Strategy} + \text{Business} + \text{Technology}$.

67. In the EA3 Cube, what sits between the "Products & Services" level and the "Systems & Applications" level?

- A) Goals & Initiatives
- B) Data & Information
- C) Networks & Infrastructure
- D) Security

Answer: B

Explanation: Based on the framework diagram, the order from top to bottom is Goals, Products, Data, Systems, Networks.

PART 3: The Structure and Culture of Enterprises (Based on "EA Lecture Note 2 The Structure and

Culture of Enterprises.pdf")

68. Why must enterprise architects understand the role of organizational structure and culture?

- A) So they can bypass human resources and hire technical staff directly.
- B) To accurately reflect the true nature of organizational goals, processes, and informal structures that influence the architecture.
- C) Because IT systems cannot function without a corporate dress code.
- D) To justify spending more money on technology.

Answer: B

Explanation: The overview states structure and culture are important to include to accurately reflect the true nature of organizational goals, processes, and informal structures.

69. Definition: The beliefs, customs, values, structure, normative rules, and material traits of a social organization is the definition of:

- A) Enterprise Architecture
- B) Change Management
- C) Culture
- D) Stakeholder

Answer: C

Explanation: This is the verbatim definition of "Culture" provided in the Key Terms slide.

70. Definition: Everyone who is or will be affected by a policy, program, project, activity, or resource is considered a:

- A) Shareholder
- B) Stakeholder
- C) Developer
- D) Competitor

Answer: B

Explanation: This is the exact definition of a "Stakeholder" in the Key Terms slide.

71. In the home architecture analogy, why does an architect need to understand the

occupants of a home?

- A) To determine their credit score.
- B) To produce an effective design based on how they use rooms, activity patterns, and storage needs.
- C) To sell them more expensive building materials.
- D) To ignore their preferences and build a standardized box.

Answer: B

Explanation: The analogy states the architect needs to understand composition, preferences, and activities to produce an effective design (how they use rooms, patterns, etc.).

72. Memorization: According to the "Influences on the Field of Enterprise Architecture" diagram, which of the following is a "Contributing Field" to Organizational Theory?

- A) Computer Science
- B) Engineering
- C) Sociology
- D) Information Assurance

Answer: C

Explanation: The diagram lists Psychology, Sociology, Political Science, and Public Administration as contributing fields to Organizational Theory.

73. In the Leavitt Diamond model, the four components are Task, Structure, People, and:

- A) Money
- B) Technology
- C) Culture
- D) Environment

Answer: B

Explanation: The four nodes of the Leavitt Diamond are Task, Structure, People, and Technology.

74. What is Leavitt's primary argument regarding his Diamond model?

- A) Technology is the only component that matters for success.

- B) A change in any one of the four components will have an effect on the others.
- C) People and Tasks have no relation to Structure.
- D) Organizational success is impossible to achieve.

Answer: B

Explanation: Leavitt argued that a change in any of these four components will have an effect on the others and their interaction underlies organizational success.

75. In the Parsons/Thompson Model of organizational structure, which level is where the organization establishes rules and relates to the larger society to secure legitimacy?

- A) Technical Level
- B) Managerial Level
- C) Institutional Level
- D) Independent Level

Answer: C

Explanation: The Institutional Level is defined as where the organization establishes rules, relates to larger society, determines domain, and secures legitimacy.

76. According to the Parsons/Thompson Model, where is the actual "product" of an organization processed?

- A) Institutional Level
- B) Managerial Level
- C) Technical Level
- D) Executive Level

Answer: C

Explanation: The Technical Level is where the actual "product" of an organization is processed (input/output functions).

77. In the Parsons/Thompson Model, the Managerial Level's function involves:

- A) Sealing off functions from the outside to protect them from uncertainties.
- B) A dynamic of mediation where less formalized and more political activities occur.
- C) Establishing boundaries and securing legitimacy from society.

D) Writing software code for internal applications.

Answer: B

Explanation: Thompson's activities for the Managerial Level describe a dynamic of mediation where less formalized and more political activities occur.

78. Situational: When relating the Parsons/Thompson Model to the EA3 Cube Framework, which levels of the EA3 Cube map directly to the "Technical Level"?

- A) Goals & Initiatives
- B) Products & Services and Data & Information
- C) Systems & Applications and Networks & Infrastructure
- D) Security and Standards

Answer: C

Explanation: The diagram "Relating Models" shows arrows from the Technical Level pointing specifically to Systems & Applications and Networks & Infrastructure.

79. Based on the mapping diagram, the "Managerial Level" of the Parsons/Thompson model corresponds to which parts of the EA3 Cube?

- A) Goals & Initiatives
- B) Products & Services and Data & Information
- C) Networks & Infrastructure
- D) Security only

Answer: B

Explanation: The diagram maps the Managerial Level to both Products & Services and Data & Information.

80. In the Organizational Network Model, who sits at the center/top communicating directly with Functional Teams and Independent Workers?

- A) Functional Team D (External)
- B) The Executive Team
- C) The Shareholders
- D) The Customer

Answer: B

Explanation: The Organizational Network Model diagram shows the Executive Team connected centrally to Functional Teams and Independent Workers.

81. According to the Organizational Network Model, can a Functional Team exist outside the primary Organizational Boundary?

- A) Yes, the diagram shows a Functional Team (external) outside the boundary.
- B) No, all teams must be strictly internal.
- C) Only if they are Independent Workers.
- D) The model does not address organizational boundaries.

Answer: A

Explanation: The diagram explicitly depicts "Functional Team D (external)" sitting outside the dashed line representing the Organizational Boundary.

82. Why is understanding the culture of an enterprise essential for an enterprise architect?

- A) It allows them to enforce a single, global corporate culture on all regional offices.
- B) It helps develop realistic views of how strategic goals are established, how processes function, and how resources are used.
- C) Culture dictates which programming language is objectively the best.
- D) It is legally required by government regulations.

Answer: B

Explanation: The slide on Understanding Culture states it is essential to developing realistic views of how strategic goals are established, processes function, and resources are used.

83. Situational: An EA program is introduced, but employees heavily resist the changes because they feel they have no say in the new processes. What management concept did the EA team fail to implement?

- A) Change Management
- B) Institutional Legitimization
- C) Technology Upgrades
- D) The Leavitt Diamond

Answer: A

Explanation: The presentation emphasizes Managing Change by involving stakeholders and increasing their control to reduce resistance.

84. Definition: The process of setting expectations and involving stakeholders in how a process or activity will be changed so they have some control and are more accepting of the change is called:

- A) Technical Architecture
- B) Change Management
- C) Systems Lifecycle Development
- D) Risk Management

Answer: B

Explanation: This is the verbatim definition of "Change Management" from the Key Terms slide.

85. What is the effect of an EA program on organizational change?

- A) It stops all change from happening.
- B) It causes change to happen in a disjointed, independent manner.
- C) It coordinates change so it is driven by new strategies and business requirements, rather than just new technologies.
- D) It forces change to happen exclusively from the bottom-up.

Answer: C

Explanation: The text states the effect of an EA program is to coordinate change such that it is driven by strategies/requirements rather than just technologies.

86. How can an EA program successfully manage change and increase stakeholder acceptance?

- A) By keeping EA planning secret until launch.
- B) By forcing stakeholders to accept changes without input.
- C) By involving stakeholders in the EA program's establishment and allowing input to planning/decision-making.
- D) By firing anyone who shows resistance to the new architecture.

Answer: C

Explanation: The Managing Change slide lists involving stakeholders, communicating regularly, allowing input, and managing expectations as ways to increase their control and acceptance.

87. In the Leavitt Diamond, if a company completely overhauls its "Technology" by introducing AI, what does the model predict will happen?

- A) Only the "Task" component will be affected.
- B) The structure, people, and tasks will remain exactly the same.
- C) The change in technology will have an effect on Task, Structure, and People.
- D) The company will instantly increase its profit margins.

Answer: C

Explanation: The core concept of the Leavitt Diamond is that a change in any one component (e.g., Technology) will have an effect on the others (Task, Structure, People).

88. According to the "Influences on the Field of Enterprise Architecture" diagram, which of the following is considered an "Emerging Field"?

- A) Information Resources Mgmt
- B) Psychology
- C) Political Science
- D) Business Administration

Answer: A

Explanation: The diagram lists Information Resources Mgmt, Information Security, Enterprise Architecture, and Records & Data Mgmt under "Emerging Fields."

89. According to the summary of Chapter 2 (Note 2), who actually makes plans and decisions about strategic direction and resource utilization in an enterprise?

- A) The IT systems
- B) The people of the enterprise
- C) The automated business processes
- D) The EA software tools

Answer: B

Explanation: The summary emphasizes that while processes and tech are important, "it is the people of the enterprise who make plans and decisions."

90. Situational: A stakeholder is actively resisting the EA program. Based on the notes on managing change, what is a likely reason for this resistance?

- A) They feel they have too much control over the changes.
- B) They feel a loss of input or control over changes in their environment.
- C) They are overwhelmed by the amount of communication from the EA team.
- D) The EA program perfectly aligns with their personal goals.

Answer: B

Explanation: The summary and Change Management slides note that stakeholders may resist EA activities if they "feel a loss of input or control."

91. In the "Relating Functional Teams to EA Lines of Business" diagram, where do the Functional Teams map?

- A) They map to the IT Infrastructure layer exclusively.
- B) They map to specific Lines of Business (LOB-1, LOB-2, etc.) in the EA3 Cube.
- C) They do not map to the EA3 Cube at all.
- D) They only map to the Executive Team.

Answer: B

Explanation: The diagram uses arrows to show that Functional Teams (A, B) map directly to specific Lines of Business (LOB-1, LOB-2, LOB-3) within the EA cube.

92. According to the Parsons/Thompson model, which level tries to "seal off" its functions from the outside to protect them from external uncertainties?

- A) Institutional Level
- B) Technical Level
- C) Managerial Level
- D) Societal Level

Answer: B

Explanation: The Technical Level is described as trying to seal off functions from the outside to

protect them from external uncertainties as much as possible to remain "rational".

93. According to the Parsons/Thompson model, which level is described as "very open to the environment"?

- A) Technical Level
- B) Institutional Level
- C) Managerial Level
- D) Production Level

Answer: B

Explanation: The Institutional Level is described as very open to the environment in order to determine its domain and secure legitimacy.

94. In the home architecture analogy, which of the following is NOT an example of a factor considered by the architect regarding the "people aspect"?

- A) How they will use the rooms
- B) Their activity patterns
- C) Their storage needs
- D) The chemical composition of the roof shingles

Answer: D

Explanation: The analogy explicitly mentions "how they will use the rooms, their activity patterns, and storage needs." Roof shingles composition is a technical detail, not a "people aspect" factor.

95. True or False context (Situational): A CEO states that culture is irrelevant to Enterprise Architecture because EA only deals with computer networks. Is this statement supported by the lecture notes?

- A) Yes, EA is strictly a technical discipline.
- B) No, the notes state EA is as much about people, social interaction, and culture as it is about technology.
- C) Yes, culture only matters in human resources, not in EA.
- D) No, because EA only deals with financial planning.

Answer: B

Explanation: Note 2 explicitly states EA is not only about technology but also people, processes, and resources, and understanding culture is essential to a good EA.

96. According to the "Influences on the Field of Enterprise Architecture" diagram, "Bureaucracy" is a contributing concept from which main theory?

- A) Systems Theory
- B) Organizational Theory
- C) Quantum Theory
- D) Network Theory

Answer: B

Explanation: In the diagram, "Bureaucracy" is listed under Contributing Concepts pointing to Organizational Theory.

97. According to the "Influences on the Field of Enterprise Architecture" diagram, "Reengineering" and "Quality" are contributing concepts from which main theory?

- A) Organizational Theory
- B) Psychological Theory
- C) Systems Theory
- D) Institutional Theory

Answer: C

Explanation: In the diagram, "Reengineering" and "Quality" are listed under Contributing Concepts pointing to Systems Theory.

98. The culture of an enterprise makes every enterprise different. This is because culture is an amalgamation of the values, beliefs, habits, and preferences of:

- A) The executive board only.
- B) The IT department only.
- C) All of the people throughout the enterprise or sub-enterprise.
- D) The competitors in the market.

Answer: C

Explanation: The Understanding Culture slide states culture is an amalgamation of the values,

beliefs, habits, and preferences of all of the people throughout the enterprise.

99. What will happen to changes within the enterprise if there is NO Enterprise Architecture program in place?

- A) No changes will ever occur.
- B) Changes will happen in a more disjointed or completely independent manner.
- C) Changes will be perfectly synchronized automatically.
- D) The enterprise will immediately go bankrupt.

Answer: B

Explanation: The Managing Change slide notes that changes will happen regardless, but without EA, they will happen in a more disjointed or completely independent manner.

100. Managing stakeholder expectations involves being clear about:

- A) Which employees will be fired.
- B) What the EA program can do (and what it cannot do).
- C) The personal lives of the executive team.
- D) How to bypass the company firewall.

Answer: B

Explanation: In the context of Change Management, managing stakeholder expectations means setting clear expectations as to what the EA program can do.
